

IKAROS Manoverboard

Compact light-smoke signal

This NEW Man Overboard signal is the most compact in the world and has an innovative 360-degree light ring that clearly marks the position of the person in the water. Despite its compact size, it delivers a dense orange smoke for more than 15 minutes.

This distress signal is designed to be mounted vertically on the ship's bridge, with one on the port and one on the starboard side.

It should be attached inside, behind or to the side of a lifebuoy at a minimum of five meters above the water line. When the lifebuoy is thrown overboard, the MOB is pulled with it and as it leaves its bracket, it automatically emits light and smoke to attract attention to the person in the water. On smaller vessels, it can be mounted on the wheelhouse bulkhead and launched manually.

The MOB light and smoke signal has an alkaline battery and can be used as a day and night marker. It is approved globally and meets the latest SOLAS regulations.

IKAROS Manoverboard (MOB) - Compact light-smoke signal

MOB MKCI Light-Smoke Signal

Performance	Light 2 cd >2 hours
Smoke duration	>15 min
